A legend in its own lifetime.
In 1998 Buckler Boots introduced a very special safety boot, the B1150 dealer style. B1150 brought rugged construction to rugged good looks in a boot design which struck a chord with users working in tough environments like few work boots have ever achieved. In 2008 we created the Buckflex feature for dealer style boots which made the fitting and removing even more wearer friendly. B1150 was fitted with this feature which is a Buckler Boots protected design so when you see one of the many B1150 lookalikes on the market, if it doesn't have Buckflex it isn't a B1150. Everyone knows that you tamper with market leading designs at your peril. However it's a fact of life that feet are getting bigger and wider which is why we have been fitting wider safety toecaps to B1150's stablemates for some years now. We have also introduced our wave tread K3 outsole on these styles. This sole has proved to be every bit as durable and reliable as the B1150's original K2 sole and comes with considerable weight saving and so we bring a wider toecap and lightweight outsole together to create a new B1150 - the B1150 MAX. A safety boot which will suit you right down to the ground.
